

RESTAURANTS

Creating exciting, innovative restaurant spaces is what KVG does best. Whether it's new construction, building out a new space, or renovating an existing restaurant, KVG can turn your dreams into reality.

We begin by analyzing your needs – everything from your target market and current restaurant trends to equipment operating and space requirements. We also identify innovative materials, design, and construction alternatives that add style and function without increased cost. This includes materials specifically designed to withstand the rigors of busy restaurants and commercial kitchens.

KVG has worked on a wide range of restaurants, from coffee and sandwich shops to sophisticated, high-end restaurants such as Sabor, Milwaukee's first Brazilian churrascaria (pictured below). KVG worked with a prominent architectural firm to convert a former brew pub into Sabor, a sleek, urban restaurant. The Wisconsin chapter of the American Society of Interior Design even bestowed a Silver Award to the architectural firm for their use of non-traditional materials in Sabor's design.

Whatever your restaurant dream – from an updated interior to a contemporary space for a new restaurant – KVG can bring it to life, on time and within budget.
